## **DETAILED ACTION**

### ***Priority***

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Allowable Subject Matter***

Claims 15,16 and 18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. None of the references of record teaches or suggests a light scattering mechanism composed of a resin into which a light scattering particle is mixed (claim 15); that the light scattering mechanism is composed of a resin of which a surface is processed to include an irregularity (claim 16); that the light scattering mechanism being composed of at least one of a resin and a glass in which a light scattering particle is dispersed and being dome shaped (claim 18).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1-14,17,19 and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Yoshimura et. al., U.S.P. No. 6,611,635.

Yoshimura 736' teaches (Figs.1-153) an optical integrated interconnection multiwavelength circuit between chips (Note that the optical modules/chips will inherently include timing chips and driving chips or other processors which are commonly used in high speed optical operations) comprising: an optical substrate 12 upon which is placed plural optical waveguides 24 (optical waveguides can be of differing widths, lengths and heights) , at least first and second light emitting/receiving devices 626,628 which are at least partially covered by the waveguide 24 and are in contact with the waveguide and the waveguide and devices are held by a polymeric cladding/ adhesive 23 wherein the first and second light emitting/receiving devices are interconnected via electrodes 27,27x which also serve as bonding/wiring pads for other optical chips/modules , which clearly, fully meets Applicant's claimed limitations.

The following references are also cited by the Examiner as being pertinent prior art: Bureau et. al., U.S.P. No. 5,262,351 (Figs.1-8b) and Harada, U.S.P. Patent Application Publication No. US 2003/0007736A1 (Figs.1-12).
